

DB Commodity Services LLC

DBC DB Commodity Index Tracking Fund

Description

Seeks to track a diversified commodity index by entering into long futures contracts and collateralizing those contracts with United States 3-month Treasury bills

DB Commodity Services LLC (DBCS), the Managing Owner, is committed to giving investors convenient and cost-effective access to the returns of the commodity and currency markets

Fund Highlights

- DIVERSIFICATION. Commodities can help to diversify a portfolio because they are negatively correlated to both equities and conventional bonds and positively correlated to inflation
- OPTIMUM YIELD. Follows the Optimum Yield™ version of the Deutsche Bank Liquid Commodity Index™ - Excess Return, which seeks to minimize the effects of negative roll yield experienced by conventional commodity indexes
- TRANSPARENCY. Provides a more direct investment in commodities markets than mutual funds that invest in commodity-linked notes, which have implicit imbedded costs and credit risk

DB Commodity Services ETF Benefits

- Track Enhanced Indexes
- Low Cost¹
- Liquid²
- Transparent
- Portfolio Diversifying³

1. Ordinary brokerage commissions may apply.

About the Fund's Index

The Deutsche Bank Liquid Commodity Index™ -Excess Return (DBLCI™) is composed of futures contracts on six of the most heavily-traded and important physical commodities in the world. The Index commodity components were chosen based on the depth and liquidity of their markets and to provide diversified commodity performance.

The **Optimum Yield™** version of the Index provides a rules-based formula for replacing an expiring futures contract with a new contract having an expiration date that generates the highest "implied roll yield". This can minimize the negative effects of rolling futures contracts when a market is in contango and maximize the positive effects of rolling futures contracts when a market is backwardated.

How does the Fund Invest?

Rather than invest in physical commodities or over-the-counter (OTC) commodity derivatives, the Fund invests in actively-traded futures contracts trading on regulated futures exchanges. This gives the Fund several potential advantages

- **COST-SAVINGS.** The Fund does not incur either the cost of storing a physical commodity or the cost of entering into an OTC derivative with a dealer, a cost that is usually much higher than entering into an exchange-traded futures contract.
- **LESS DEFAULT RISK.** OTC derivatives, such as commodity-linked notes, carry the risk that the issuer of the note will fail to make a payment. By investing in futures contracts that trade on regulated exchanges and clear through centralized clearinghouses, the Fund seeks to mitigate this risk.
- **INTEREST EARNED.** Owning physical commodities provides an investor with no interest income. The Fund collateralizes its futures contracts with United States 3-month Treasury bills and earns interest on these securities. This income offsets the Fund's expenses. DBCS believes that this is likely to result in a better return for investors.
- **TRANSPARENCY AND LIQUIDITY.** The Fund invests in actively-traded futures contracts at publicly-available prices determined by trading on a regulated futures exchange. DBCS believes that this allows the Fund to gain more direct and cost effective exposure to commodities at better prices than if the Fund either bought OTC derivatives, which are not publicly priced, or futures contracts that are not actively traded.

Footnotes

- Fund shares may be sold throughout the day on the exchange through any brokerage account. However, shares may only be purchased from or sold to the Fund by Authorized Participants in blocks of 200,000 shares.
- Fund shares are subject to some risks and costs similar to those associated with stocks, such as those relating to short selling and margin account maintenance.
- PAST PERFORMANCE IS NOT NECESSARILY INDICATIVE OF FUTURE RESULTS.** The Index performance results are hypothetical and do not represent Fund returns. Hypothetical or simulated performance results have certain inherent limitations. Unlike an actual performance record, simulated results do not represent actual trading. Also, since the trades have not actually been executed, the results may have under- or over-compensated for the impact, if any, of certain market factors, such as lack of liquidity. Simulated trading programs in general are also subject to the fact that they are designed with the benefit of hindsight. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. It is not possible to invest directly in an index.

Performance results for the DBLCI – Total Return Optimum Yield™, which include interest earned on collateral, are displayed because the Fund has retained earnings on collateral. However, please note that the Fund's objective is to track the DBLCI - Excess Return Optimum Yield™, which does not include interest earned on collateral. Note also that the hypothetical performance of the DBLCI – Total Return Optimum Yield™ does not include fees or expenses.

- "DBLCI-TR OY" is the Deutsche Bank Liquid Commodity Index – Total Return Optimum Yield™.
